

# What is the pigtail on a router

## Overview

---

One end comes with a ready-to-use connector, while the other is a bare fiber ready to be fused. A pigtail connector is a short cable with a connector on one end and bare (stripped) wire or fiber on the other. In fiber optics, pigtails are fusion-spliced to field fiber inside splice trays — the most common termination method in telecom and data center networks. Whether it's an electrical system in your car, home, or factory, the quality of the connection is essential, and that's where pigtail connectors come in. These small, often overlooked components ensure a strong, safe electrical connection.
