

What is the thickness of fireproof cable trays in Slovakia

Overview

The gap area between firestop packs and cables should not exceed 1 cm², and the packing thickness should be not less than 24 cm. The IEC standard for cable tray includes multiple technical and performance-based criteria. Ensure mechanical strength is sufficient to prevent deformation or failure under full load. Basor Electric, sensitive to the need to minimize the consequences of a fire, has subjected its cable trays to rigorous fire resistance tests to ensure the behavior of its products. Application: Apply the primer uniformly, ensuring the thickness meets the design specifications. Material Selection: Fireproof coatings must comply with national safety standards.

What is the thickness of fireproof cable trays in Slovakia

Why Choose Fireproof Cable Trays for Safety?

Fireproof cable trays can be employed in a wide range of applications, including commercial buildings, hospitals, data centers, and even residential setups where fire safety is a

Fireproof Cable Trays Acceptance: Standards for Safety

The proper coating and acceptance of fireproof cable trays are essential for long-term performance and safety. This guide explains the critical
