

What is used to fix the cable tray vertically

Overview

An assembly (often with threaded rods) used to suspend the tray from the ceiling/overhead structure. Regarding cable management, the fixing and mounting you choose for your cable trays can make or break your setup. Whether you're managing voice, data, or electrical cables, ensuring your trays are installed correctly is essential to keeping everything neat, secure, and functional. This publication is intended as a practical guide for the proper and safe* installation of cable ladder systems, cable tray systems, channel support systems and associated supports. The main types of accessories are categorized by their function: Fittings change the path or size of the run, including Elbows (for horizontal or vertical direction changes), Tees and Crosses (for multi-directional junctions), and Reducers (to transition between different tray widths). Vertical supports are used for applications where cables must run vertically, for example, between floors in a multi-story building.
