

What kind of beam splitter can be placed in an optical distribution box

Overview

It has a sharp cut - off edge, so it can precisely control which wavelengths pass through and which are reflected. An Optical Beamsplitter is an optic or optical device that is used to split a beam of light in two. Circular beamsplitters, plate beamsplitters and cube beamsplitters can be purchased for polarizing or non polarizing beamsplitting. a laser beam) into two (or sometimes more) beams, which may or may not have the same optical power (radiant flux).
